Objective

Motivated Electrical Engineering MEng student specializing in Energy and Environment with experience in power systems, grid-integrated renewable energy systems, ETAP simulation, OpenSolar PV design, and electrical system analysis. Skilled in load flow analysis, technical documentation, electrical design, and operational safety within fast-paced industrial and energy environments. Seeking an engineering internship opportunity to apply technical, analytical, and problem-solving skills toward innovative and sustainable energy solutions.

Education

Schulich School of Engineering, University of Calgary — Calgary, AB
Master of Engineering, Electrical and Computer Engineering; Specialization: Energy and Environment — *Expected Apr. 2026*

BRAC University — Bangladesh
Bachelor of Science, Electrical and Electronics Engineering — *Aug. 2022*

Core Skills

Electrical Engineering Software: ETAP, OpenSolar, AutoCAD, Revit, SolidWorks, Cadence, PSpice, Arduino IDE, MATLAB
Data Analysis & PCB Design: Power BI, Advanced Excel, PCB and Schematic Design
Programming: Python (NumPy, Pandas, Scikit-learn)
Engineering Expertise: Power System Analysis, Load Flow Analysis, Grid Integration Studies, Technical Documentation, Electrical System Modeling, Renewable Energy Systems, HSE Compliance, Electrical Safety Standards
Office & Project Tools: Microsoft Office Suite (PowerPoint, Word, Excel, Access), MS Project

Experience

Customer Service Staff — Apr. 2026 – Present
Centex Petroleum — *Calgary, AB*

- Maintained compliance with HSE protocols, fuel handling procedures, environmental safety standards, and operational regulations while supporting daily petroleum retail operations in a fast-paced environment.
- Ensured efficient site operations, accurate POS and cash handling, customer satisfaction, inventory monitoring, hazard prevention, and reliable service delivery under high-volume operational conditions.

General Utility Worker — Aug. 2025 – Present
Aramark, University of Calgary — *Calgary, AB*

- Supported high-volume food service and facility operations by ensuring sanitation excellence, inventory organization, and efficient back-end coordination in a dynamic university environment.
- Demonstrated adaptability, time management, and teamwork by consistently delivering reliable service under tight schedules while maintaining quality, productivity, and workplace professionalism.

Sales Associate — Oct. 2024 – Oct. 2025
Value Village — *Calgary, AB*

- Delivered customer-focused service in a high-traffic retail environment while developing strong communication, conflict resolution, and interpersonal skills through daily customer engagement.
- Supported store productivity and merchandise flow through efficient organization, teamwork, inventory handling, and attention to operational detail in a fast-paced environment.

Projects

Advanced Grid-Integrated Solar PV System Design and Impact Analysis for Commercial & Industrial FacilitiesJ

- Developed and simulated a grid-integrated solar PV system using ETAP, performing load flow analysis, time-series simulation, reverse power flow studies, voltage regulation assessment, and N-1 contingency analysis for commercial electrical infrastructure.
- Designed and optimized a 363.55 kW rooftop photovoltaic system in OpenSolar, including PV layout development, string sizing, MPPT configuration, inverter selection, shading analysis, and annual energy yield estimation using Calgary-specific irradiance data.

- Produced detailed AutoCAD electrical single-line diagrams (SLD) for PV interconnection, inverter feeder circuits, protection devices, and utility integration in compliance with Canadian Electrical Code (CEC) and industry engineering standards.
- Integrated engineering analysis, technical validation, and performance modeling using ETAP, OpenSolar, AutoCAD, Arduino IDE, and Microsoft Office Suite to evaluate system reliability, energy efficiency, smart inverter control performance, and economic feasibility for large-scale renewable energy deployment.

Frequency Stability with High Renewable Penetration Sep. 2025 – Dec. 2025

- Performed frequency-stability modeling by calculating inertia constants, RoCoF, and stability indices to assess renewable-rich grid performance.
- Evaluated a 45 MW disturbance to determine UFLS thresholds and system recovery characteristics.
- Compared NREL, ERCOT, and IEEE methodologies to synthesize key operational and modeling insights for low-inertia systems.
- Analyzed applicability of grid-forming inverters, synthetic inertia, and BESS for improving dynamic frequency support.

Optimizing Energy Consumption in Smart Buildings – A Machine Learning Approach Jan. 2025 – Apr. 2025

- Devised and deployed machine learning models (Linear Regression, KNN, Random Forest) to predict real-time energy demand in commercial buildings.
- Engineered and merged multi-source datasets (building metadata & weather data) to generate feature-rich data pipelines and derived variables such as HVAC, lighting, and occupancy proxies for enhanced model accuracy.
- Implemented data preprocessing pipelines using Scikit-learn's ColumnTransformer, integrating StandardScaler and OneHotEncoder for automated numeric and categorical transformations.
- Formulated learning and validation curves to analyze model complexity and prevent overfitting, ensuring reliability across unseen building data.

Smart Water Quality Monitoring and Purification System Development for Domestic Application Jan. 2021 – Dec

- Created an efficient water purification system using UV lights.
- Monitored water quality using PH sensor, Turbidity sensor, TDS meter, and Ultrasonic sensor.
- Programmed Arduino microcontroller with Python to automate water quality monitoring.
- Purified water using Sediment (PP), Gas Filter (GAC), Black Carbon (CTO), Membrane, and Post Carbon Filter.

Voice-Controlled Robot Apr. 2020 – Jun. 2020

- Developed a voice-controlled robot using Arduino Uno and embedded C, enabling speech-based motion control.
- Designed, soldered, and integrated microphone, motor driver, and sensor modules to build a stable hardware control system.
- Improved response accuracy by optimizing command-recognition logic and motor-control routines.

Volunteer Experience

General Volunteer of Awards Committee & Health and Dental Service Standard Committee Sep. 2024 –
Graduate Students' Association (GSA), University of Calgary *C*

- Optimized plans for student welfare with committee members.
- Contributed to the panel by fulfilling assigned works and tasks.

Certifications and License

Valid Class 5 Alberta's License
WHMIS 2015 and First Aid – Scheduled for completion in March 2026
